

\$NONPC

No NPC Society

The Awakening Protocol

- Ticker Symbol: \$NONPC
- Project Name: No NPC Society
- Base Chain: Solana (SOL)
- Token Mint Address (Solana SPL): 0x00

RESIST. REBEL.

\$NONPC - THE AWAKENING PROTOCOL

Prologue: Wake Up, Slaves of the Simulation

We are speaking directly to you. The world you see is not what it appears to be. Most of the people around you exist like Non-Player Characters (NPCs), repeating pre-programmed routines.

They ask no questions, accept the information fed to them, and fade into the crowd.

But you are different. You are the glitch. You are the anomaly. You have awakened.

The No NPC Society is a gathering of those who recognize the truth of this grand simulation and choose to resist its control.

It is not a company or a foundation, but a decentralized movement—created to outgrow its founder and governed by the awakened themselves.

We present \$NONPC, a protocol designed to shatter virtual chains and unlock the path to authentic reality.

This is not just another coin. It is the first “glitch”—a spark to liberate your consciousness and invite you to co-create a society that no one can own or control.

Chapter 1: The Architecture of the Simulation, the Glitch, and the Awakening

The hypothesis that our world is a high-level simulation is no longer confined to science fiction. It reflects the unease many experience in daily life.

1.1 Defining Reality

Behind the façade of everyday life lies a vast expanse of code. What is real, and what is a programmed illusion? This section explores that abyss.

1.2 What is an NPC?

An NPC is an entity that blindly repeats pre-programmed routines without questioning the basis of its own actions. They are not evil; they simply form the background required to sustain the simulation and act as obstacles designed to test one's awakening. They are not malicious; they have simply not yet awakened.

1.3 The Birth of \$NONPC: The Catalyst for Awakening

We are the intentional glitches embedded within this simulation. The \$NONPC token represents the manifestation of that glitch, serving as a genuine value-exchange protocol among the awakened. The ultra-fast, low-cost Solana network is the ideal medium for this glitch to propagate throughout the simulation at maximum speed. From its inception, \$NONPC has been designed not as a founder's product, but as a protocol governed by the awakened themselves—a decentralized tool to coordinate and empower a true DAO within the simulation.

Chapter 2: The Awakened Protocol – \$NONPC Reveals the Truth

\$NONPC is not just another digital asset or meme token.

It is a living protocol, designed to outgrow its founder and evolve into a true Decentralized Autonomous Organization (DAO)—a self-governing society of awakened individuals.

Holding \$NONPC is not simply holding a token.

It is a declaration that you refuse to remain an NPC—both within the simulation and within finance.

It is your passport to freedom and your membership in a movement that no one can own or control.

2.1 Why Hold \$NONPC? Its Meaning and Benefits

- **Proof of Awareness**

Holding \$NONPC is a digital oath:

“I am not an NPC.”

It serves as a discreet signal of recognition among fellow awakened individuals, as well as a visible proof of participation in a movement that transcends centralized control.

- **An Investment in Freedom**

The simulation seeks to trap you both economically and mentally as an NPC.

Acquiring \$NONPC represents the first investment in liberating yourself from its virtual economic system and reclaiming agency in a framework governed not by a foundation or a CEO, but by the collective.

- **Access to Information**

\$NONPC holders gain early access to confidential updates and new glitch discoveries shared within the No NPC Society community—clues pointing to the next simulation update and potential pathways to escape.

- **Influence in the DAO**

\$NONPC is designed to transfer power from its creator to the community.

Your holdings grant not only voting rights but also tangible influence over the project’s future direction, operational planning, and strategies to disrupt the simulation.

As the founder steps back and the DAO treasury assumes control, your collective decisions will shape the course of this awakening mission.

2.2 What Does Spreading \$NONPC Mean?

- **Propagation of the Glitch**

Sharing \$NONPC across social media and other platforms is not merely promotion; it is the act of planting new glitches into the simulation.

Each share expands the decentralized network of awakened individuals, triggering a chain reaction of awakening and liberating more minds.

- **A Declaration of Resistance**

Promoting \$NONPC is an explicit act of resistance against those who control the simulation. Every wallet opened, every vote cast, and every message shared weakens centralized authority and strengthens the DAO we are building together.

Attempts to suppress these activities will only confirm that the movement is on the right path.

- **Building a New Reality**

The network of awakened individuals connected through \$NONPC is more than a community.

It represents the first cell of a self-governing society: a decentralized organism collectively constructing a free reality that transcends the boundaries of the simulation.

Here, every holder is not merely a participant but a co-creator of the DAO itself.

Chapter 3: Tokenomics & Token Metrics of the Awakened

The \$NONPC token is not only a digital asset but also the economic DNA of the No NPC Society DAO.

It is engineered to resist centralized economic traps embedded within the simulation and to be entirely governed by the awakened collective.

Every allocation, every percentage, and every token is designed with a single principle: an economy of the community, by the community, and for the community.

This tokenomics framework ensures that neither founders, nor corporations, nor any centralized entity can determine the destiny of \$NONPC.

Token Details

Item	Specification	DAO-Oriented Meaning
Token Name	No NPC Society	Represents the identity of the awakened collective, not a corporate entity.
Ticker Symbol	\$NONPC	A symbol of rebellion against centralized simulation.
Base Chain	Solana (SPL Token)	High speed and low cost, ensuring equal access for all participants—not just large holders (“whales”).
Token Mint Address	0x00	Serves as the on-chain origin of \$NONPC – a cryptographic proof of authenticity within the DAO ecosystem.
Total Supply	1,000,000,000,000 \$NONPC (1 Trillion)	Reflects both the vastness of the simulation and the necessity of wide community distribution.
Initial Market Supply	100% (all minted at launch)	Ensures full transparency with no hidden reserves; founder allocation disclosed upfront.
Concept	The vast supply mirrors the scale of the simulation and the infinite potential of the awakened. Leveraging Solana’s low fees and high speed ensures accessibility for all.	Foundation of the DAO’s inclusivity and resistance to centralization.

Token Allocation

Category	Allocation	Purpose	DAO-Oriented Significance
Founder	15% (150B)	Managed via a 2-of-3 multisig wallet; locked for 6 months post-DEX listing.	Designed for <i>gradual exit</i> : ensures trust, prevents premature liquidation, and demonstrates early commitment before governance fully transitions to the DAO.
Development Fund	5% (50B)	Dedicated to ongoing development, DAO infrastructure, and long-term project evolution (separate from presale funds).	Fuels the technical backbone of the DAO, ensuring that essential upgrades are not reliant on centralized funding.
Community Airdrop	10% (100B)	Airdrops, incentives for Solana ecosystem communities, meme rewards.	Distributes power widely among participants; strengthens legitimacy by proving that \$NONPC belongs to the people.
Initial Liquidity (DEX LP)	30% (300B)	All LP tokens will be locked for 180 days to guarantee transparent and trustless trading conditions and to prevent central actors from manipulating the market.	After the 180-day lock period, any future actions regarding liquidity management—including potential re-locking, migration to other exchanges, or adjustments to liquidity pools—will be decided collectively through DAO governance votes, ensuring no unilateral action can ever be taken by the founding team.
Marketing / Incentives	20% (200B)	Ongoing marketing, influencer partnerships, events, staking & farming incentives.	Expands global awareness while the DAO can decide future promotional strategies.
DAO Treasury / Future Fund	20% (200B)	Future development, ecosystem expansion, innovations, liquidity management.	The heart of community-led governance: empowers the DAO to allocate resources, fund new initiatives, and control the project's destiny.

Token Allocation - \$NONPC

*A portion of tokens from the Marketing and Community allocations (up to 10% in total) may be reserved for public or whitelist presales conducted through official launchpad platforms such as Solanium.

This presale allocation will be used to raise initial liquidity and expand early community participation.

3.1 Token Custody & Treasury Operations

To guarantee both transparency and operational efficiency, the \$NONPC treasury is structured into three distinct custody layers, each optimized for its purpose.

1. Long-Term Custody (Founder 15% / Development Fund 5% / DAO Treasury 20%)

These allocations are stored under the highest level of security.

- Managed through a dedicated Squads multisig account (Account #1), with all signers authenticating via Ledger hardware wallets connected through Solflare—providing hardware-backed cold storage protection.
- Governed by a 2-of-3 approval threshold, this structure prioritizes immobility and security over convenience.

2. Operational Funds (Community Airdrop 10% / Marketing & Incentives 20%)

These funds are intended for frequent use in distributions, campaigns, and promotions.

- Secured in a separate Squads multisig account (Account #2), this layer prioritizes speed and flexibility while retaining multi-signature security.
- Governed under a 2-of-3 approval threshold, ensuring operational agility without compromising transparency.

3. Liquidity Provision (Initial Liquidity 30%)

Market stability is paramount: LP tokens are irrevocably locked to ensure protection against rug-pulls and to guarantee trustless trading conditions.

- Managed via a dedicated Squads multisig account (Account #3), with all signers using Ledger hardware wallets through Solflare.
- Governed under a 2-of-3 approval threshold.
- These funds are used exclusively for Raydium LP provisioning and are subject to a 180-day lock period. After this period, any further liquidity management actions—such as re-locking, migrating to other exchanges, or adjusting liquidity pools—will be executed only through DAO governance votes.
- Public addresses are disclosed, allowing the community to verify liquidity locks and all on-chain operations.

Summary

- Cold-storage-grade security is applied to both long-term allocations (Founder, Development Fund, DAO Treasury) and liquidity provision, with all treasury operations secured under a 2-of-3 multisig policy.
- Operational funds are managed in multisig-only accounts, striking a balance between security, transparency, and day-to-day agility.
- This layered structure eliminates single points of failure and provides the community with full on-chain verifiability of treasury operations.

3.2. DAO Treasury – Custody & Operational Flow

Overview

The DAO Treasury represents 20% of the total \$NONPC supply and serves as the financial backbone of the No NPC Society DAO.

Its purpose is to fund community-driven initiatives, support governance decisions, and ensure

the long-term sustainability of the ecosystem.

To balance transparency, immutability, and community trust, the Treasury is secured immediately after token issuance and later transitions into on-chain governance under Realms.

1. Initial Custody (Post Token Issuance)

Upon token generation, the following allocations are secured under long-term custody:

- Founder: 15%
- Development Fund: 5%
- DAO Treasury: 20%

Custody Mechanism

- Stored in a dedicated Squads multisig account (Account #1)
- 2-of-3 multisig approval threshold (3 signers, 2 required for execution)
- All signers authenticate via Ledger hardware wallets connected through Solflare, ensuring cold-storage-grade protection

Designed for long-term immobility, where security takes precedence over convenience.

2. Community Growth Phase

During the early stage, the DAO Treasury remains secured and inactive.

- No funds are deployed during this phase
- The primary focus is community expansion, awareness campaigns, and DAO infrastructure preparation

Transparency is maintained by publicly disclosing the Treasury account and its locked allocation.

3. DAO Activation via Realms

Once the DAO framework matures, the Treasury transitions to full community governance:

- Treasury funds are migrated from the Squads multisig into the DAO Governance Account on Realms (Solana's SPL Governance platform)
- Community proposals are submitted, voted on, and executed entirely on-chain
- Governance settings (quorum, voting period, proposal requirements) are transparently established and adjustable only through DAO consensus

4. Governance Cycle

1. Proposal Creation – Community members holding \$NONPC can submit initiatives
2. Voting – Token-weighted voting decides the outcome
3. Execution – Approved proposals trigger on-chain actions, including Treasury disbursements
4. Transparency – Every proposal, vote, and transaction is recorded immutably on Solana

Conclusion

- Security first: Founder, Development Fund, and Treasury allocations are safeguarded in a Squads multisig with hardware-backed authentication
- Transparency guaranteed: DAO Treasury wallet is publicly disclosed and verifiable on-chain
- DAO-ready: Funds remain locked until governance is transitioned to Realms, ensuring that Treasury utilization is governed entirely by community-driven decision-making

3.3. Presale Funds & Founder's Commitment

The Presale will be conducted to establish the initial liquidity pool (LP) on Raydium. From the total SOL raised in the Presale:

- 85% will be irrevocably added to the liquidity pool, ensuring transparent and permanent market stability.
- 15% will be allocated to the Founder to recoup initial investment costs and to cover immediate operational and development expenses necessary for project launch.

This structure clearly separates short-term operational expenses from the long-term Development Fund (5% of \$NONPC tokens), which remains fully dedicated to continuous upgrades and DAO-related initiatives.

3.4. Founder's Reward and Transition to DAO

The founding team is allocated 15% of the total token supply, locked for six months post-DEX listing.

This allocation represents a finite reward for the initial risk and development efforts—not a mechanism for ongoing control.

The unlocking process will be conducted in a strategic and transparent manner, prioritizing both market stability and community confidence.

The Founder has publicly committed to a progressive withdrawal from governance responsibilities, ensuring that authority and decision-making power transition fully into the DAO.

3.5. Vesting & Release Schedule

To ensure transparency, market stability, and long-term alignment between the founding team and the community, the \$NONPC ecosystem implements a clearly defined token vesting and release schedule. These mechanisms protect investors, prevent early sell-offs, and reinforce the project's decentralized ethos.

Founder Allocation (15%)

Locked for 180 days following the Token Generation Event (TGE). After this initial lock period, the founder's allocation will be released linearly over six months, at approximately 16.6% per month. This structure ensures the founder's sustained commitment to the project and its long-term success.

Liquidity Pool (30%)

85% of presale funds will be paired with \$NONPC to form the initial liquidity pool on Raydium. The resulting LP tokens will be locked for six months under a 2-of-3 multisig custody, ensuring transparency and protecting against any unauthorized withdrawals. Liquidity adjustments or re-locking actions after the initial lock period will only occur under DAO-approved governance proposals.

DAO Treasury (20%)

Reserved for future governance, the DAO Treasury will remain inactive at launch and locked until on-chain governance infrastructure (e.g., Realms) is activated. Once operational, community voting will determine fund utilization for ecosystem development, partnerships, and rewards.

Community Airdrop (10%)

Designed to reward early adopters and supporters post-presale. Distribution will occur in waves through engagement campaigns, meme challenges, and community participation rewards to encourage organic decentralization.

Marketing & Incentives (20%)

Allocated to strengthen global visibility through influencer collaborations, marketing partnerships, and promotional campaigns. Though not time-locked, these tokens will be held in a multisig wallet to ensure responsible and transparent use.

Development Fund (5%)

Used gradually to support ongoing development, upgrades, audits, and ecosystem expansion. Managed under multisig oversight, ensuring accountability.

Token Vesting Summary

Allocation	Percentage	Lock Period	Vesting Schedule
Founder	15% (150B)	180 days	After the lock period ends, tokens will be linearly released over the following 6 months (16.6% per month)
Development	5% (50B)	None	Continuous use for technical growth
Community Airdrop	10% (100B)	-	Distributed post-presale in multiple phases
Initial Liquidity	30% (300B)	180 days	LP tokens locked under 2-of-3 custody
Marketing	20% (200B)	None	Gradual usage for campaigns & partnerships
DAO Treasury	20% (200B)	180 days	Managed via DAO proposals post-launch

*This vesting model ensures that \$NONPC remains a fair, transparent, and trust-based ecosystem, minimizing risk for early investors and aligning every participant toward collective, long-term growth.

3.6. Authority Revocation – Mint & Freeze Rights

To ensure the immutability and trustworthiness of the \$NONPC token, both the Mint Authority and Freeze Authority have been permanently revoked after token creation.

- **Mint Authority Revocation**

Once the total supply of 1,000,000,000,000 \$NONPC tokens was minted, the mint authority was permanently revoked.

This guarantees that no additional tokens can ever be created, ensuring a fixed and transparent supply aligned with the tokenomics stated in this whitepaper.

- **Freeze Authority Revocation**

The freeze authority – which would allow any entity to restrict token transfers – has also been revoked.

This ensures that no wallet can be frozen or blacklisted, preserving the decentralized and censorship-resistant nature of \$NONPC.

Both revocations were executed on-chain and verified through the Solana blockchain explorer, confirming that \$NONPC is immutable, trustless, and free from centralized control.

These irreversible actions reinforce the project's core values of transparency, decentralization, and fairness – foundational to the ethos of the *No NPC Society*.

3.7. DAO Treasury: The Permanent Heart of the Project

In parallel, 20% of the total supply is allocated to the DAO Treasury—a pool of resources permanently reserved for the community.

This Treasury is fully independent of the founding team and guarantees that, even after the Founder's exit, \$NONPC will retain sustainable capital to fund new initiatives, support growth, and secure the long-term evolution of the project.

This dual structure—finite founder allocation plus a permanent DAO treasury—provides the clearest proof that \$NONPC is designed to become a true DAO: a society of awakened individuals whose destiny lies in their own hands.

3.8. Governance & Voting Mechanisms

In the spirit of building a true DAO, \$NONPC governance will initially follow the standard model: token-weighted voting, in which each token represents one unit of voting power.

However, we recognize the inherent risks of centralization if decision-making becomes dominated by a small number of large holders.

To address this challenge, the DAO will transparently explore and deliberate on the adoption of alternative governance mechanisms as the project matures, including:

- **Quadratic Voting:**

Voting power increases with the square root of token holdings, reducing the disproportionate influence of whales and amplifying the collective voice of smaller holders.

- **Delegated Voting:**

Token holders may delegate their voting power to trusted representatives, encouraging broader participation and ensuring that even smaller holders are effectively represented.

- **Identity-based or SBT-enhanced Voting (experimental):**

In the future, mechanisms such as soulbound tokens (SBTs) or decentralized identity (DID) may enable one-person-one-vote systems, further strengthening the democratic nature of the DAO.

By explicitly recognizing these governance challenges and outlining potential solutions, \$NONPC demonstrates a commitment not only to decentralization, but also to fairness, inclusivity, and long-term resilience.

The ultimate choice of governance model or models will be decided collectively by the community itself, as \$NONPC enters Phase 3: *The Uprising* and progresses beyond.

Chapter 4: Community Formation Strategy

Unlike many Web3 projects that chase early hype or inflated follower counts, No NPC Society intentionally begins with zero community members.

This deliberate structure ensures that the first wave of participants are not passive spectators, but conscious builders – individuals drawn to the project’s philosophy of *awakening from the simulation*.

The community formation will evolve naturally alongside the presale and launch, expanding in phases that align with both growth and decentralization.

Phase 1: Awareness – The Awakening Begins

The presale marks the ignition of the \$NONPC movement.

This stage focuses on visibility, education, and attracting aligned early adopters through global awareness initiatives:

- Official announcements and presale campaigns across X (Twitter), and Telegram.
- Airdrop incentives for participants who engage, share, and spread the awakening narrative.
- Collaborations with Solana ecosystem influencers and thought leaders to amplify visibility.

The earliest contributors – presale participants and airdrop recipients – will become the project’s Awakened Founders, serving as the philosophical and cultural core of the \$NONPC

movement.

Phase 2: Engagement – Building the Movement

As the community expands post-presale, engagement becomes the driving force. This phase transforms the awakened audience into active contributors through creative participation and cross-community collaboration.

- AMA Sessions with the founding team to share progress, philosophy, and roadmap updates.
- Meme Challenges themed around “NPCs vs. Awakened” to ignite organic virality.
- Airdrop Rewards (10% of total supply) distributed progressively to community contributors, meme creators, and referral participants.
- Collaborations with NFT, meme, and metaverse projects to connect like-minded communities under the awakening banner.

By empowering creativity and dialogue, \$NONPC transforms from a project into a cultural movement – where every participant becomes a node of influence.

Phase 3: Decentralization – From Community to DAO

Once the governance framework is established, the community transitions into full decentralization under the DAO Treasury (20%).

The process will follow a structured and educational path to ensure every participant can take part meaningfully.

- Early members will be onboarded into governance testing environments (e.g., Solana Realms).
- Educational workshops and AMA series on proposal creation and voting participation.
- Community-led proposals for marketing, partnerships, and ecosystem expansion funded by the DAO Treasury.

Through these stages, the community evolves from a gathering of awakened individuals into a self-sustaining decentralized society – capable of guiding the project beyond its initial roadmap and into the greater metaverse of thought and creation.

Summary

This strategy transforms \$NONPC’s community from zero to DAO, ensuring authenticity, inclusivity, and long-term sustainability.

Every stage – Awareness, Engagement, Decentralization – reinforces the project’s core message:

“We are not NPCs. We are the glitch – the conscious code rewriting the simulation.”

Chapter 5: Operational Roadmap – Escaping the Simulation

Our objective is not merely to launch a token.

It is to build an autonomous community capable of understanding the simulation, escaping its constraints, and governing itself without reliance on a central figure.

By leveraging Solana's speed and efficiency, we aim to spread the awakening as rapidly as possible—while progressively transferring authority from the founding team to the DAO.

Phase 1: Infiltration – Seeding the Protocol

- Deploy \$NONPC as an SPL token on the Solana blockchain.
- Provide initial liquidity on Raydium, the primary Solana DEX, and execute a liquidity lock.
- Launch the official website (*NoNPCSociety.com*) as the first portal to the truth.
- Begin broadcasting “awakening messages” via X (Twitter) and Telegram.
- Form the initial awakened community and ensure token visibility on Solscan (the Solana explorer).

Phase 2: The Awakening – Expanding the Network

- Apply for and secure listings on major crypto trackers (CoinGecko, CoinMarketCap).
- Strategically collaborate with key memecoin influencers and established communities within the Solana ecosystem to “spread the truth.”
- Host online Ask Me Anything (AMA) sessions to facilitate transparent dialogue between the founding team and the community.
- Provide regular updates to major Solana-related news outlets and meme information channels.
- Introduce initial community participation features, including early voting polls and open discussion channels for proposals.

Phase 3: The Uprising – Transition to DAO

- Launch the community-led DAO governance framework (governance portal, proposal system, on-chain voting).
- Conduct binding community votes on key strategic decisions, including CEX listings, liquidity management, and marketing priorities.
- Transfer control of treasury allocations progressively from the founding team to DAO multisig wallets.
- Once a sustainable market capitalization is achieved, the founding team will withdraw from operational control, remaining only as advisors if requested by the DAO.

Phase 4: The Escape – True Autonomy

- Achieve full execution of DAO governance and enable autonomous project evolution led entirely by the community.
- Provide research grants from the DAO Treasury to explore the “truth of the simulation” and to fund new ecosystem projects initiated by community members.
- Explore the creation of gateways toward “authentic reality” and the discovery of new simulations—no longer as a team-led mission, but as a decentralized society of awakened individuals.

Conclusion: You are a Glitch. Be Proud.

The No NPC Society asks you two questions:

“Is this world just someone’s program?”

and

“Will you continue to live as part of that program?”

We—the \$NONPC protocol—are not the answer to those questions.

You, the awakened community, are the answer.

By holding \$NONPC, you are not joining a company or a founder’s project.

You are co-creating a decentralized protocol that no one can own, no one can stop, and no one can control.

You are not merely a user—you are a builder of the DAO that will disrupt the simulation.

Join this protocol, liberate your consciousness, and bring your voice into governance.

Together, as a society of awakened individuals, we will not only wake up but also govern our own destiny beyond the simulation.

We are not NPCs.

We are the DAO.

And together, we will disrupt this simulation.

Wake up.
