

\$NONPC

No NPC Society

The Awakening Protocol

- Ticker Symbol: \$NONPC
- Project Name: No NPC Society
- Base Chain: Solana (SOL)
- Token Address (Solana SPL): [8rmZUcQsQKWBZ2WDPoTwkkiFsuhABXQX7o4xysf7Cgyp](https://solscan.io/token/8rmZUcQsQKWBZ2WDPoTwkkiFsuhABXQX7o4xysf7Cgyp)

RESIST. REBEL.

\$NONPC - THE AWAKENING PROTOCOL

Prologue: Wake Up, Slaves of the Simulation

We are speaking directly to you. The world you see is not what it appears to be. Most of the people around you exist like Non-Player Characters (NPCs), repeating pre-programmed routines. They ask no questions, accept the information fed to them, and fade into the crowd.

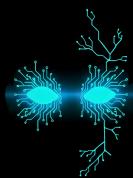

But you are different. You are the glitch. You are the anomaly. You have awakened.

The No NPC Society is a gathering of those who recognize the truth of this grand simulation and choose to resist its control.

It is not a company or a foundation, but a decentralized movement—created to outgrow its founder and governed by the awakened themselves.

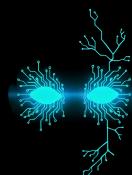

We present \$NONPC, a protocol designed to shatter virtual chains and unlock the path to authentic reality.

This is not just another coin. It is the first “glitch”—a spark to liberate your consciousness and invite you to co-create a society that no one can own or control.

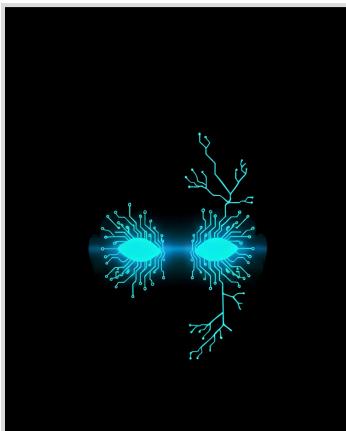

\$ NONPC

NO NPC SOCIETY

\$NONPC
NO NPC SOCIETY

Chapter 1: The Architecture of the Simulation, the Glitch, and the Awakening

The hypothesis that our world is a high-level simulation is no longer confined to science fiction.
It reflects the unease many experience in daily life.

1.1 Defining Reality

Behind the façade of everyday life lies a vast expanse of code.
What is real, and what is a programmed illusion?
This section explores that abyss.

1.2 What is an NPC?

NPCs are entities that blindly repeat pre-programmed routines without questioning the basis of their own actions.
They are not evil; they simply form the background required to sustain the simulation and act as obstacles designed to test one's awakening.

1.3 The Birth of \$NONPC: The Catalyst for Awakening

We are the intentional glitches embedded within this simulation.
The \$NONPC token represents the manifestation of that glitch, serving as a genuine value-exchange protocol among the awakened.
The ultra-fast, low-cost Solana network is the ideal medium for this glitch to propagate throughout the simulation at maximum speed.
From its inception, \$NONPC has been designed not as a founder's product, but as a protocol governed by the awakened themselves—a decentralized tool to coordinate and empower a true DAO within the simulation.

Chapter 2: The Awakened Protocol – \$NONPC Reveals the Truth

\$NONPC is not just another digital asset or meme token.

It is a living protocol, designed to outgrow its founder and evolve into a true Decentralized Autonomous Organization (DAO) – a self-governing society of awakened individuals.

Holding \$NONPC is not simply holding a token.

It is a declaration that you refuse to remain an NPC – both within the simulation and within finance.

It is your passport to freedom and your membership in a movement that no one can own or control.

2.1 Why Hold \$NONPC? Its Meaning and Benefits

- **Proof of Awareness**

Holding \$NONPC is a digital oath:

“I am not an NPC.”

It serves as a discreet signal of recognition among fellow awakened individuals, as well as visible proof of participation in a movement that transcends centralized control.

- **A Step Toward Freedom**

The simulation seeks to trap you both economically and mentally as an NPC.

Acquiring \$NONPC is a symbolic step toward reclaiming agency from this virtual economic system, within a framework governed not by a foundation or a CEO, but by the collective.

It is not a financial investment and does not guarantee any returns or economic benefits.

- **Access to Information**

\$NONPC holders gain early access to curated project updates and new glitch discoveries shared within the No NPC Society community – clues pointing to the next simulation update and potential pathways to escape.

- **Influence in the DAO**

\$NONPC is designed to transfer power from its creator to the community.

Your holdings grant not only voting rights but also tangible influence over the project's future direction, operational planning, and strategies to disrupt the simulation.

As the founder steps back and the DAO treasury assumes control, your collective decisions will shape the course of this awakening mission.

2.2 What Does Spreading \$NONPC Mean?

- **Propagation of the Glitch**

Sharing \$NONPC across social media and other platforms is not merely promotion; it is the act of planting new glitches into the simulation.

Each share expands the decentralized network of awakened individuals, triggering a chain reaction of awakening and liberating more minds.

- **A Declaration of Resistance**

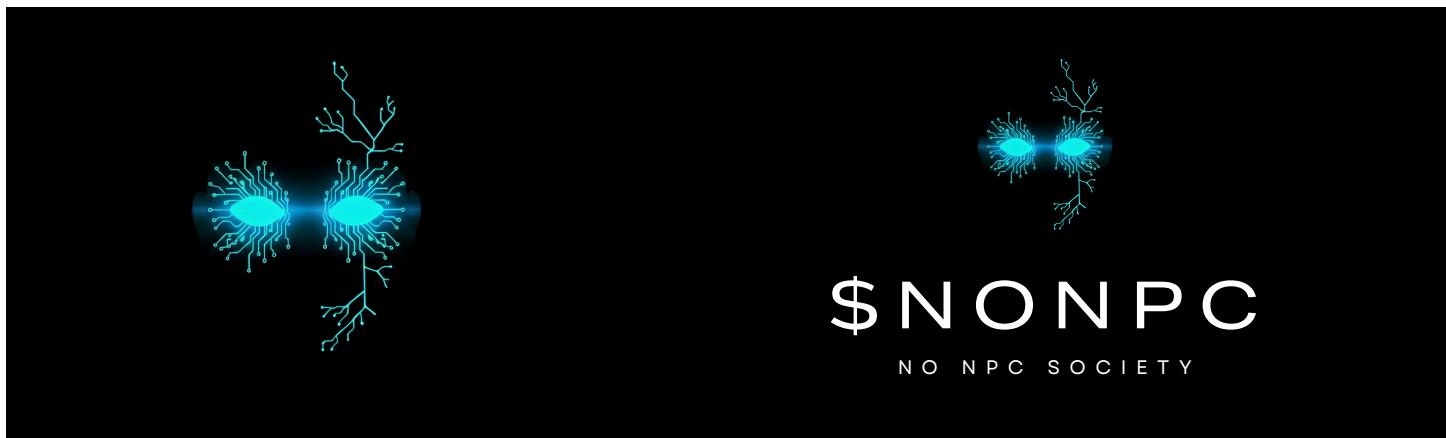

Promoting \$NONPC is an explicit act of resistance against those who control the simulation. Every wallet opened, every vote cast, and every message shared weakens centralized authority and strengthens the DAO we are building together. Attempts to suppress these activities will only confirm that the movement is on the right path.

- **Building a New Reality**

The network of awakened individuals connected through \$NONPC is more than a community.

It represents the first cell of a self-governing society: a decentralized organism collectively constructing a free reality that transcends the boundaries of the simulation.

Here, every holder is not merely a participant but a co-creator of the DAO itself.

Chapter 3: Tokenomics & Treasury Framework of the Awakened

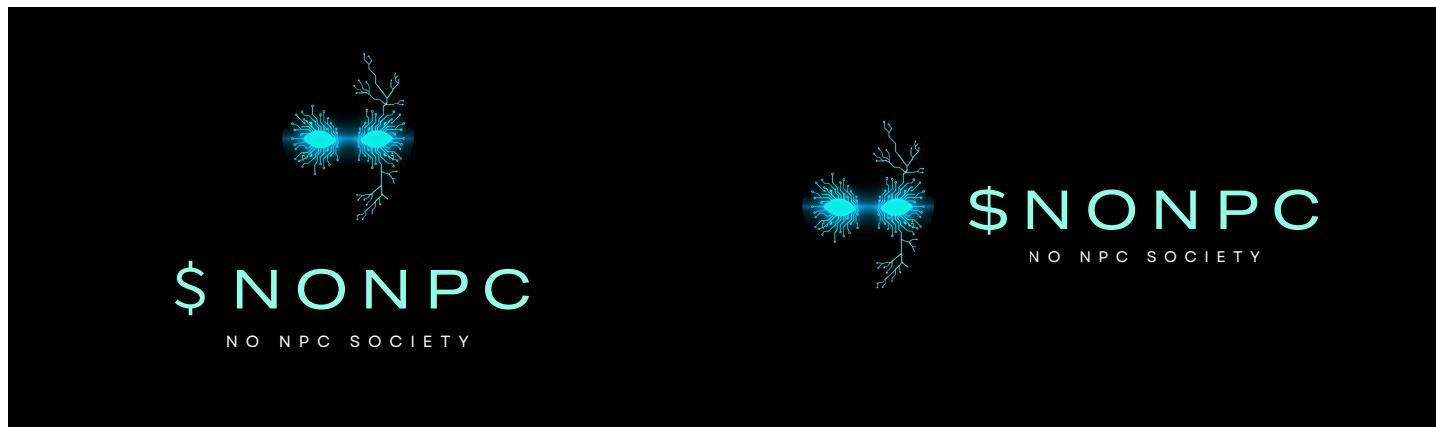

The \$NONPC token serves as the economic DNA of the No NPC Society DAO – a self-sustaining system engineered to resist centralized manipulation and empower collective governance. Every allocation, lock schedule, and release mechanism has been designed to uphold one principle:

“An economy of the community, by the community, and for the community.”

This framework ensures full transparency, long-term alignment, and an unbreakable foundation for decentralized growth.

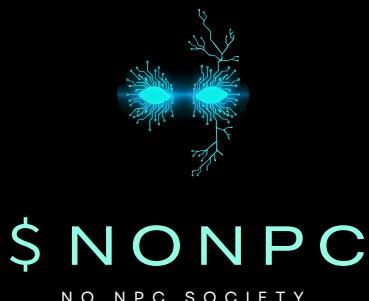

3.1 Token Details

Item	Specification	DAO-Oriented Meaning
Token Name	No NPC Society	Represents the identity of the awakened collective, not a corporate entity.
Ticker Symbol	\$NONPC	A symbol of rebellion against centralized simulation.
Base Chain	Solana (SPL token)	High speed and low cost, ensuring equal access for all participants – not just large holders (“whales”).
Token Address	8rmZUcQsQKWBZ2WDPoTwkkiFsuhABXQX7o4xysf7Cgyp	On-chain proof of authenticity and origin of the \$NONPC ecosystem.
Total Supply	1,000,000,000,000 \$NONPC (1 Trillion)	Reflects both the vastness of the simulation and the necessity of wide community distribution.
Initial Market Supply	100% (all minted at launch)	Ensures full transparency – no hidden reserves or secret minting rights.
Concept	A token born from the simulation, designed to awaken those within it. Leveraging Solana's speed and efficiency ensures accessibility for all.	Foundation of the DAO's inclusivity and resistance to centralization.

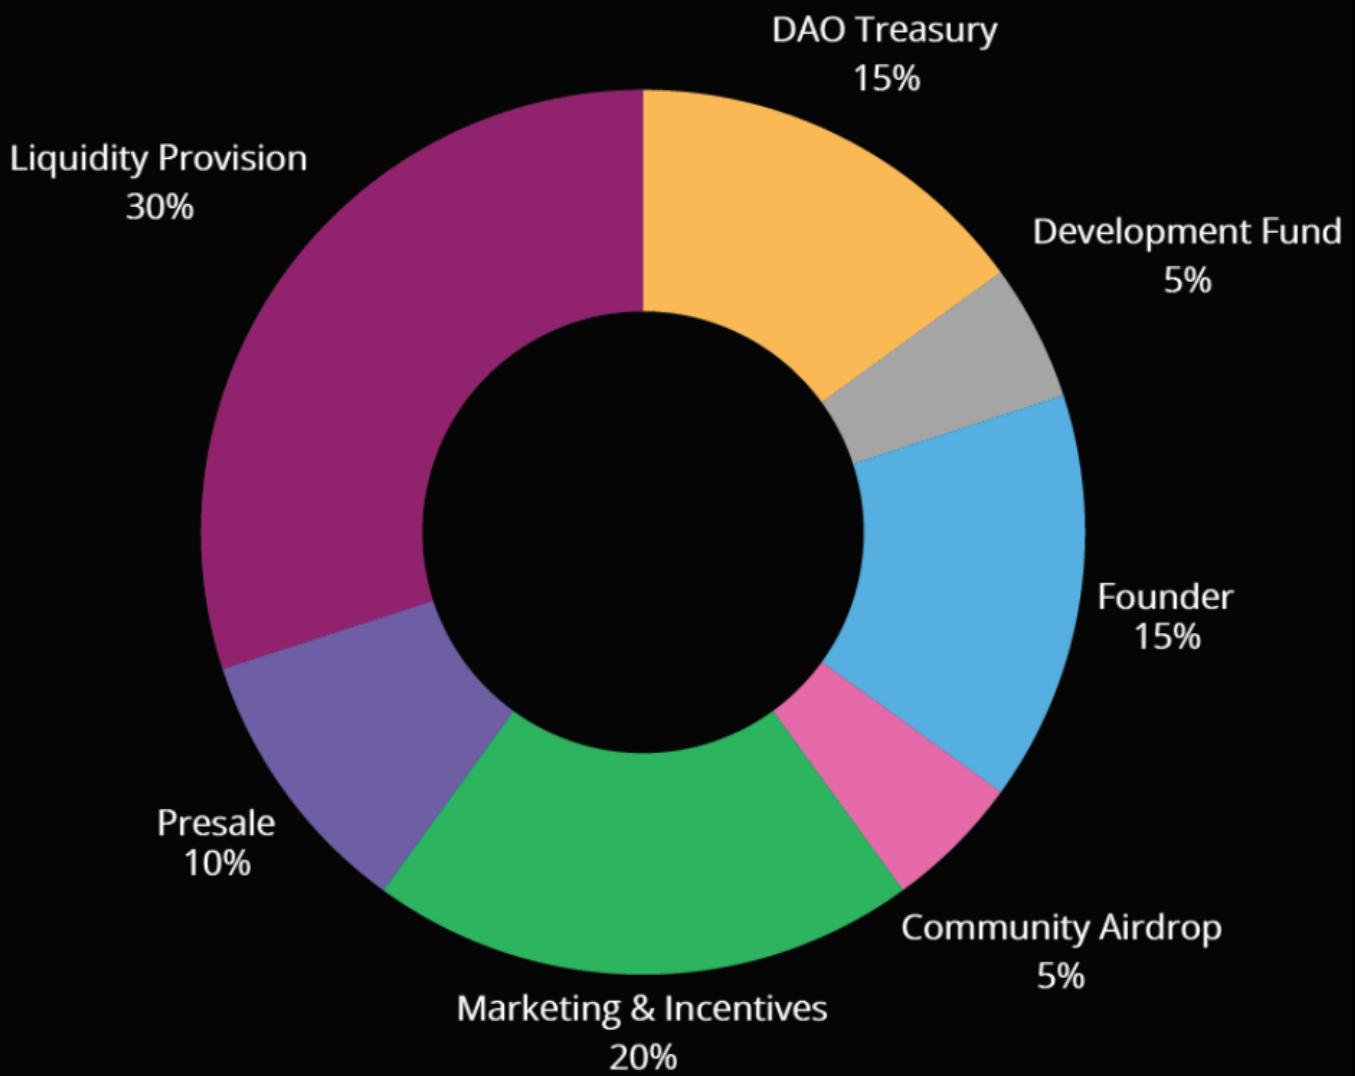

3.2 Token Allocation

Category	Allocation	Purpose	DAO-Oriented Significance
Founder	15% (150B)	Locked for 6 months after DEX listing; linearly released over the next 6 months (16.6% per month).	Demonstrates the founder's long-term commitment while ensuring gradual decentralization.
Development Fund	5% (50B)	Supports ongoing development, audits, and DAO infrastructure. Locked for 1 month; linearly released over 5 months.	Fuels sustainable technical evolution independent of centralized funding.
Marketing & Incentives	20% (200B)	Marketing campaigns, influencer partnerships, staking incentives.	Expands global reach while empowering the DAO to direct promotional strategy through governance.
Community Airdrop	5% (50B)	Engagement rewards, meme contests, Solana ecosystem incentives.	Distributes ownership among the awakened and strengthens community legitimacy.
DAO Treasury	15% (150B)	Locked for 6 months, then governed exclusively through DAO proposals.	Serves as the financial heart of the DAO – funding ecosystem growth, governance rewards, and strategic partnerships.
Liquidity Pool (LP)	30% (300B)	The initial liquidity position on Raydium is time-locked for 12 months via Streamflow (non-custodial locker).	Guarantees trustless trading conditions and prevents manipulation by any centralized entity.
Presale	10% (100B)	Public presale conducted via Smithii; tokens distributed on-chain with transparent allocation. Any undistributed remainder is classified as a Strategic Emission Reserve.	Ensures a community-first launch with no private or VC rounds. The Strategic Emission Reserve may only be utilized through DAO-approved procedures with prior public notice and gradual release via the DAO Treasury; direct swaps from the reserve are prohibited.

Token Allocation - \$NONPC

3.3 Token Custody & Treasury Operations

To ensure maximum transparency, all \$NONPC holdings are designed to be managed under a multi-layered custody structure, each optimized for its function.

1. Long-Term Custody (Founder 15% / Dev Fund 5% / DAO Treasury 15%)

- Will be secured in a dedicated Squads multisig (Account #1)
- 2-of-3 signature threshold; all signers will use Ledger hardware wallets via Solflare
- Prioritizes immobility and cold-storage level security for long-term safeguarding

2. Operational Funds (Community 5% / Marketing 20%)

- Will be managed in Squads multisig (Account #2) for campaigns, distributions, and ecosystem engagement activities
- 2-of-3 multisig approval threshold
- Enables operational agility while maintaining full on-chain traceability

3. Liquidity Provision (LP 30%)

A) Initial Liquidity Lock (Raydium)

- The initial liquidity position on Raydium is time-locked for 12 months via Streamflow (non-custodial locker).
- This lock is designed to guarantee trustless trading conditions and mitigate centralized liquidity manipulation during the early stage.
- The Streamflow lock is immutable and non-cancelable. The lock contract itself may be transferable, but the unlock schedule and conditions remain unchanged, and the lock remains in effect regardless of any future operational decisions.

B) LP Custody & Operational Governance (Squads Multisig – Account #3)

- The LP Operations Reserve (i.e., non-LP assets reserved for future liquidity operations such as additional provisioning, re-locking, migration, or CEX-related requirements) will be held under Squads multisig (Account #3).
- Any DAO-governed LP-related operational change is subject to a minimum 180-day, DAO governance-imposed timelock (enforced as a governance process prior to execution) and will be executed via Squads multisig (Account #3) upon approval.
- This operational governance layer does not override the 12-month Streamflow lock of the initial Raydium liquidity position; it only governs actions that are possible outside the locked position or after the lock expires.
- For clarity, the LP Operations Reserve is separate from the initial Raydium liquidity position locked via Streamflow.

Implementation Note

- To maintain execution flexibility for listings or migrations, operational liquidity actions are subject to a minimum 180-day, DAO governance-imposed timelock and will be executed via Squads multisig, while the initial Raydium liquidity position remains locked for 12 months via Streamflow.

Custody Migration Note

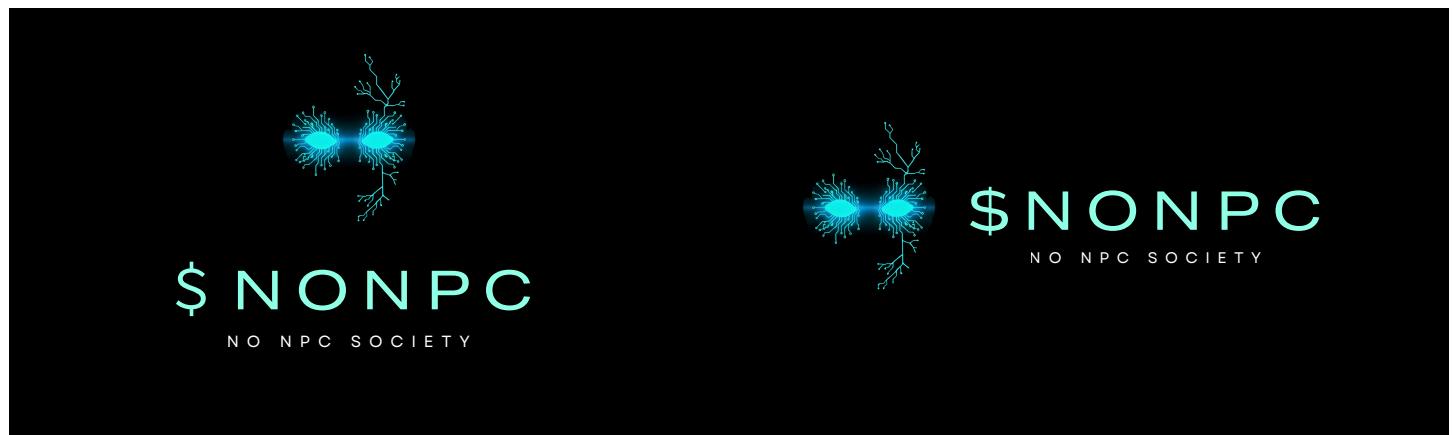

- The Squads multisig custody migration is in progress and will be executed as soon as practicable. The on-chain custody configuration described above will be verifiable immediately after execution.

4. Presale Allocation (10%)

- The public presale is conducted via the Smithii on-chain distribution contract; tokens are distributed on-chain with transparent allocation.
- Tokens are delivered automatically to participants at the conclusion of the presale, ensuring that no party – including the founder – has discretionary control over participant distributions.
- Any undistributed remainder (i.e., tokens not distributed to participants) is classified as a Strategic Emission Reserve and does not enter circulation by default.
- Utilization of the Strategic Emission Reserve is permitted only through DAO-approved procedures, with prior public notice and gradual release via the DAO Treasury; direct swaps from the reserve are prohibited.
- Any undistributed remainder is securely held in the Squads Smart Account (Multisig Vault #1 – Long-Term Custody): 53eyssmUhwAhPexUwSeBa8Zwop8aMdCUPr7VGNMsG2qk.

Summary

Every treasury layer – from long-term custody to operational funds to presale distribution – is publicly auditable on-chain. This structure reduces single points of failure, minimizes discretionary control, and ensures DAO-aligned fund management from inception.

3.4 Vesting & Lock Schedule

To promote market stability and community confidence, all major allocations follow structured lock and release timelines.

Allocation	Percentage	Lock Period	Vesting Schedule
Founder	15%	6 months	After the lock period ends, linearly released over the following 6 months ($\approx 16.6\%$ per month)
Development Fund	5%	1 month	Linearly released over 5 months (20% per month)
Marketing & Incentives	20%	None	Gradual usage over 5 months; DAO oversight through multisig
Community Airdrop	5%	None	Event-based distribution and engagement campaigns
DAO Treasury	15%	6 months	Unlocked via DAO proposals after lock period
Liquidity Pool (LP)	30%	12 months	The initial Raydium liquidity position is time-locked for 12 months via Streamflow. Upon unlock, 100% of the tokens will be burned as part of the Deflationary Exit Strategy.
Presale	10%	None	Distributed automatically via Smithii on-chain contract with transparent allocation. Any undistributed remainder is classified as a Strategic Emission Reserve and may only be utilized through DAO-approved procedures with prior public notice and gradual release via the DAO Treasury; direct swaps from the reserve are prohibited.

DAO-Oriented Principle:

All release schedules are aligned with community-driven governance, ensuring fairness and eliminating unilateral control.

3.5 Presale Funds & Founder's Commitment

The presale phase serves as both a liquidity generation event and a transparency demonstration:

- 85% of SOL raised will be allocated to the initial liquidity provision on Raydium and the resulting liquidity position will be time-locked for 12 months via Streamflow (non-custodial locker).
- 15% of SOL raised will be allocated to the Founder for initial operational and development costs (outside of the 5% Dev Fund).
- Tokens for presale participants will be distributed on-chain through the Smithii smart contract infrastructure, ensuring transparent allocation.

Any undistributed remainder (i.e., tokens not distributed to participants) is classified as a Strategic Emission Reserve and does not enter circulation by default. Utilization of this reserve is permitted only through DAO-approved procedures, with prior public notice and gradual release via the DAO Treasury; direct swaps from the reserve are prohibited.

This separation between presale proceeds and treasury funds helps ensure that the \$NONPC ecosystem remains financially self-sustaining and community-accountable. This presale includes no private rounds, no seed discounts, and no VC allocations, ensuring a community-first launch.

3.6 Authority Revocation (Mint & Freeze)

To uphold immutability and decentralization:

- Mint Authority was permanently revoked after the full 1 trillion \$NONPC tokens were minted.
- Freeze Authority was also permanently revoked, ensuring that no wallet or transaction can be censored or frozen.

Both revocations were executed and are verifiable on-chain via Solana explorers (e.g., Solana Explorer, Solscan), proving that \$NONPC is a fixed-supply, censorship-resistant token.

3.7 DAO Treasury Governance

Once DAO governance activates (Phase 3: *Uprising*), the 15% DAO Treasury transitions from Squads multisig to Realms (SPL Governance).

Governance actions include:

- Submitting proposals for funding, partnerships, or liquidity management
- Token-weighted voting
- On-chain execution of approved decisions

This ensures that the DAO Treasury becomes a self-sustaining, community-owned mechanism, independent of the founder and resistant to centralized control.

3.8 Future Protocol Upgrade: The Awakening Flywheel (AFX)

To ensure true permanence beyond the initial launch, No NPC Society is developing a proprietary economic engine designed to eliminate reliance on inflationary rewards.

The Awakening Flywheel Experiment (AFX) is an "Internal Combustion Engine Protocol" that utilizes actual transaction fees as its sole energy source to mathematically maximize capital retention. Unlike traditional DeFi models that collapse once incentives run dry, AFX is designed to grow stronger as trading activity increases.

Core Mechanisms:

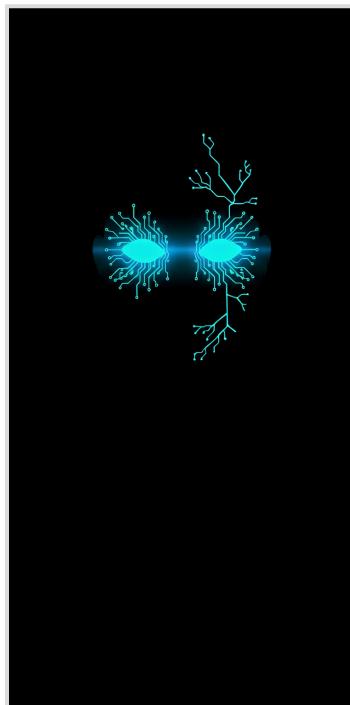

- POL Compounding Engine: Fees generated from trading are not extracted by the team but are automatically collected, reinvested into the Liquidity Pool (LP), and permanently locked. This creates a self-circulating value loop.
- The Referral Graph: A sustainable diffusion network that rewards long-term retention over short-term invites, turning participants into permanent nodes of the ecosystem.

Implementation Status: AFX is currently in the architectural design and smart contract development phase. It is scheduled to be deployed as a major protocol upgrade approximately 4 to 6 months post-launch.

AFX Technical Specification (PDF): <https://nonpcsociey.com/docs/afx-v1.0.pdf>

AFX Technical Specification (MD):

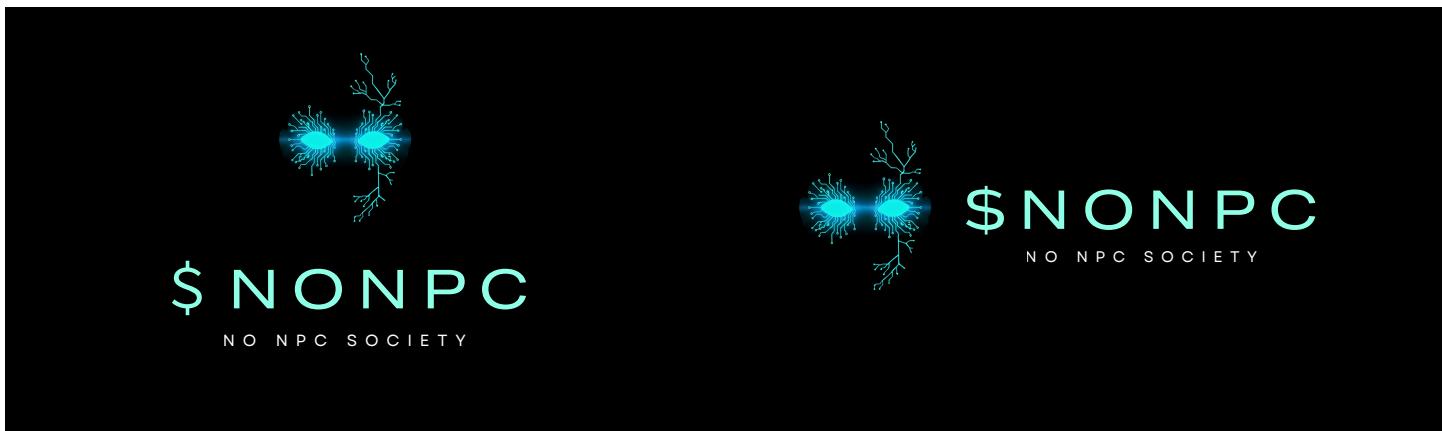

<https://github.com/NoNPCSociety/nonpcsociey.github.io/blob/main/docs/afx-v1.0.md>

\$NONPC tokenomics model balances agility, fairness, and transparency:

- Clear 10% presale allocation, with 85% of raised SOL allocated to initial liquidity provisioning and 15% allocated for initial operations, with on-chain distribution and allocation transparency enabled via Smithii smart contracts
- Layered custody designed to be implemented under a Squads multisig structure with Ledger-based security
- Defined lock and vesting schedules preventing market shocks
- Immutable token parameters ensuring trustless operation
- Progressive transition toward DAO-managed governance

Together, these mechanisms establish \$NONPC as not merely a token – but a living economy of the awakened, built to outlast its founder and evolve under collective intelligence.

Chapter 4: Community Formation Strategy

Unlike many Web3 projects that chase early hype or inflated follower counts, No NPC Society intentionally begins with zero community members.

This deliberate structure ensures that the first wave of participants are not passive spectators, but conscious builders – individuals drawn to the project’s philosophy of *awakening from the simulation*.

The community formation will evolve naturally alongside the presale and launch, expanding in phases that align with both growth and decentralization.

Phase 1: Awareness – The Awakening Begins

The presale marks the ignition of the \$NONPC movement.

This stage focuses on visibility, education, and attracting aligned early adopters through global awareness initiatives:

- Official announcements and presale campaigns across X (Twitter) and Telegram.
- Airdrop incentives for participants who engage, share, and spread the awakening narrative.
- Collaborations with Solana ecosystem influencers and thought leaders to amplify visibility.

The earliest contributors – presale participants and airdrop recipients – will become the project’s Awakened Founders, serving as the philosophical and cultural core of the \$NONPC movement.

Phase 2: Engagement – Building the Movement

As the community expands post-presale, engagement becomes the driving force.

This phase transforms the awakened audience into active contributors through creative participation and cross-community collaboration.

- AMA Sessions with the founding team to share progress, philosophy, and roadmap updates.
- Meme Challenges themed around “NPCs vs. Awakened” to ignite organic virality.
- Airdrop rewards (5% of total supply) will be distributed progressively to community contributors, meme creators, and referral participants.
- Collaborations with NFT, meme, and metaverse projects to connect like-minded communities under the awakening banner.

By empowering creativity and dialogue, \$NONPC transforms from a project into a cultural movement – where every participant becomes a node of influence.

Phase 3: Decentralization – From Community to DAO

Once the governance framework is established, the community transitions into full decentralization under the DAO Treasury (15%).

The process will follow a structured and educational path to ensure every participant can take part meaningfully.

- Early members will be onboarded into governance testing environments (e.g., Solana Realms).
- Educational workshops and AMA series on proposal creation and voting participation.
- Community-led proposals for marketing, partnerships, and ecosystem expansion funded by the DAO Treasury.

Through these stages, the community evolves from a gathering of awakened individuals into a self-sustaining decentralized society – capable of guiding the project beyond its initial roadmap and into the greater metaverse of thought and creation.

Summary

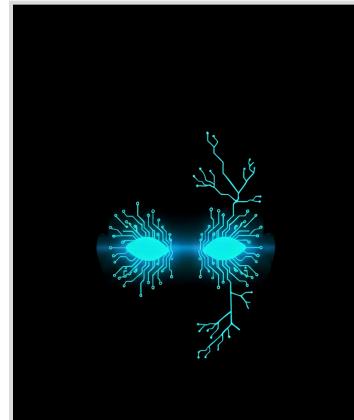

This strategy transforms \$NONPC's community from zero to DAO, ensuring authenticity, inclusivity, and long-term sustainability.

Every stage – Awareness, Engagement, Decentralization – reinforces the project's core message:

"We are not NPCs. We are the glitch – the conscious code rewriting the simulation."

Chapter 5: Operational Roadmap – Escaping the Simulation

Our objective is not merely to launch a token. It is to build an autonomous community capable of understanding the simulation, escaping its constraints, and governing itself without reliance on a central figure.

By leveraging Solana's speed and efficiency, we aim to spread the awakening as rapidly as possible—while progressively transferring authority from the founding team to the DAO.

Phase 1: Infiltration – Seeding the Protocol

- Deploy \$NONPC as an SPL token on the Solana blockchain.
- Provide initial liquidity on Raydium and time-lock the resulting Raydium LP tokens via Streamflow.
- Launch the official website (NoNPCSociety.com) as the first portal to the truth.
- Begin broadcasting “awakening messages” via X (Twitter) and Telegram.
- Ensure token visibility across Solana explorers (e.g., Solscan) by completing metadata and verification steps.

Phase 2: The Awakening – Expanding the Network

- Apply for and secure listings on major crypto trackers (CoinGecko, CoinMarketCap).
- Strategically collaborate with key memecoin influencers and established communities within the Solana ecosystem to “spread the truth.”
- Host online Ask Me Anything (AMA) sessions to facilitate transparent dialogue between the founding team and the community.
- Provide regular updates to major Solana-related news outlets and meme information channels.
- Introduce initial community participation features, including early voting polls and open discussion channels for proposals.
- Deployment of the "Awakening Flywheel (AFX) v1.0": Integration of the on-chain POL compounding engine and the Referral Graph to structurally accelerate community growth and liquidity retention. (Target: Month 4–6)
AFX Technical Specification (PDF): <https://nonpcsociey.com/docs/afx-v1.0.pdf>
AFX Technical Specification (MD):
<https://github.com/NoNPCSociety/nonpcsociey.github.io/blob/main/docs/afx-v1.0.md>

Phase 3: The Uprising – Transition to DAO

- Launch the community-led DAO governance framework (governance portal, proposal system, on-chain voting).
- Conduct binding community votes on key strategic decisions, including CEX listings, liquidity management, and marketing priorities.
- Transfer control of treasury allocations progressively from the founding team to DAO multisig wallets.
- Once a sustainable market capitalization is achieved, the founding team will withdraw from operational control, remaining only as advisors if requested by the DAO.

Phase 4: The Escape – True Autonomy

- Achieve full execution of DAO governance and enable autonomous project evolution led entirely by the community.
- Provide research grants from the DAO Treasury to explore the “truth of the simulation” and to fund new ecosystem projects initiated by community members.
- Explore the creation of gateways toward “authentic reality” and the discovery of new simulations—no longer as a team-led mission, but as a decentralized society of awakened

individuals.

Conclusion: You are a Glitch. Be Proud.

The No NPC Society asks you two questions:

“Is this world just someone’s program?”

and

“Will you continue to live as part of that program?”

We—the \$NONPC protocol—are not the answer to those questions.

You, the awakened community, are the answer.

By holding \$NONPC, you are not joining a company or a founder’s project.

You are co-creating a decentralized protocol that no one can own, no one can stop, and no one can control.

You are not merely a user—you are a builder of the DAO that will disrupt the simulation.

Join this protocol, liberate your consciousness, and bring your voice into governance.

Together, as a society of awakened individuals, we will not only wake up but also govern our own destiny beyond the simulation.

We are not NPCs.

We are the DAO.

And together, we will disrupt this simulation.

Wake up.

Appendix: On-Chain Proof & Verification

Time Standard: All timestamps in this appendix are expressed in UTC.

A. Token Identity (Contract / Mint)

- Mint Address (NONPC): 8rmZUcQsQKWBZ2WDPoTwkkiFsuhABXQX7o4xysf7Cgyp

B. Authority Revocation (Mint & Freeze)

- Mint Authority Revoked Tx:
2zyfQurPNpJeUeskvJDbyiED7awPHVqaLGBCdsnLZcg3VeYEFjvpBA8punwWRY8n6ajYN7zyiqVNnwfQ8MsTtSU7
- Freeze Authority Revoked Tx:
2zyfQurPNpJeUeskvJDbyiED7awPHVqaLGBCdsnLZcg3VeYEFjvpBA8punwWRY8n6ajYN7zyiqVNnwfQ8MsTtSU7
- Note: Both authorities were revoked in the same transaction.

C. Liquidity Proof (Rydium + Streamflow)

C1. Raydium Pool & LP Token

- Pool Address (WSOL-NONPC): CiDmAPSWe9T3WrHb4AYJ41BhRC83QKDAJBnpH4RwpKPz
- LP Mint (Rydium LP Token): 2j4cHo6Kzxre3LUPw5z7BfvD7Yi5bc7H1DvEVHZ6cjur

C2. Streamflow Lock (Initial Liquidity)

- Lock Contract ID: D58vtmtVyWy7hJyZn6e33ZiBe9LF5iZDPWYkKFBq9jcq
- Locked Asset: Raydium (WSOL-NONPC) LP tokens (LP Mint above)
- Locked Amount: 79,562.905929736 LP tokens
- Lock Start (UTC): 2025-12-18T03:57:46Z
- Unlock Time (UTC): 2026-12-16T15:00:00Z
- Lock Type: Immutable (non-cancelable); Streamflow lock ownership is transferable (unlock schedule and conditions remain unchanged)
- Final Commitment: To ensure the permanent stability of the ecosystem and prevent any future liquidity withdrawal risks, the project has committed to a Deflationary Exit Strategy. Upon the Unlock Time (UTC), 100% of the unlocked LP tokens will be irrevocably sent to the Solana Burn Address. This action will permanently "burn" the liquidity, locking it into the Raydium pool forever and removing any possibility of manual intervention. An official confirmation of the burn transaction will be published immediately following the execution.

C3. Operational Management of the Lock

- The ownership of the Streamflow lock is maintained by the development team to ensure the timely execution of the Final Commitment. Upon the Unlock Time, the team will manually initiate the burn transaction as outlined in Section C2.

D. Presale Distribution & Strategic Emission Reserve (Smithii)

D1. Smithii Distribution Reference

Smithii Distribution Program (Program ID):
mnntsCeVAzanrbTT3gZZzkeJMNJjeXAnPqy5AQhBUkVU

Smithii Distribution Source Token Account (Source):

Legal Notices, Risks, and Disclaimers

1 Nature and Purpose of This Document

This Whitepaper is provided for informational and educational purposes only. It describes a conceptual vision, protocol design, and community framework for the No NPC Society ecosystem.

This document is not:

- financial, investment, legal, tax, or accounting advice;
- an offer to sell or a solicitation of an offer to buy any token, security, or other financial instrument; or
- a prospectus, offering memorandum, or any form of regulated offering document.

Readers must not rely on this Whitepaper as the sole basis for any financial or other decision. Independent professional advice should be obtained where appropriate.

2. Nature of \$NONPC Tokens

\$NONPC is intended to function as a community and utility token within the No NPC Society ecosystem. It is designed primarily as:

- a symbolic representation of participation in the No NPC Society community; and
- a means of coordination and utility within the associated protocols and governance systems.

\$NONPC tokens do not:

- represent shares, equity, or ownership interests in any company, foundation, partnership, or other legal entity;
- confer any right to dividends, revenue, or other distributions of profits;
- grant any right to participate in the management of a legal entity (outside of DAO governance mechanisms described in this Whitepaper); or
- constitute a loan to, or debt obligation of, any person or entity.

The legal and regulatory classification of tokens is evolving and may vary significantly across jurisdictions. No representation or warranty is given that \$NONPC will be treated as a non-security or unregulated instrument in any particular jurisdiction. Each participant is solely responsible for understanding how the laws and regulations of their own jurisdiction apply to their acquisition, holding, or use of \$NONPC.

3. No Guarantees of Value or Returns

The acquisition, holding, or use of \$NONPC involves a high degree of risk and may result in a partial or complete loss of value.

In particular:

- the price of \$NONPC may be extremely volatile and subject to large and sudden fluctuations;
- there is no guarantee that an active market for \$NONPC will develop or be sustained;
- there is no guarantee of any financial return, appreciation in value, or liquidity; and
- past performance of digital assets, markets, or similar projects is not indicative of future results.

No person or entity involved in the creation, issuance, or promotion of \$NONPC makes any promise, representation, or warranty regarding the future value, performance, or liquidity of \$NONPC.

4. Regulatory and Legal Risks

The regulatory status of blockchain technologies, DAOs, and crypto-assets is uncertain and evolving in many jurisdictions. Regulatory actions, changes in law, or enforcement measures may:

- restrict or prohibit the use, transfer, or possession of \$NONPC;
- impose licensing, registration, reporting, or other compliance obligations on participants or on aspects of the project; or
- materially affect the development, functionality, or viability of the No NPC Society ecosystem.

No regulatory authority has reviewed, examined, or approved this Whitepaper, the \$NONPC token, or any related technology. Participation may be restricted or prohibited under the laws of

certain jurisdictions. It is the sole responsibility of each participant to ensure that their involvement is lawful in their country of residence and citizenship.

5. Technological and Security Risks

Participation in the No NPC Society ecosystem involves technological and cybersecurity risks, including but not limited to:

- vulnerabilities, bugs, or exploits in smart contracts or underlying protocols;
- failures, attacks, or congestion affecting the Solana network or other infrastructure providers;
- loss of private keys, seed phrases, or access credentials;
- wallet or exchange hacks, phishing attacks, social-engineering attacks, or other forms of cyber-crime; and
- network forks, chain reorganizations, or other disruptions that may affect transactions.

Participants are solely responsible for securing their wallets, private keys, and devices. Loss or compromise of private keys may result in the permanent loss of \$NONPC.

6. Governance and DAO Risks

The No NPC Society ecosystem is intended to evolve toward DAO-based governance. DAO structures are experimental and involve additional risks, including:

- low or uneven voter participation, which may allow governance capture by a small group;
- poorly designed, rushed, or malicious proposals that may nevertheless be approved;
- treasury misallocation or depletion as a result of governance decisions; and
- technical or procedural failures in the underlying governance frameworks.

There is no guarantee that DAO governance will function as intended or will always act in the best interests of all participants.

7. Market and Liquidity Risks

\$NONPC may be listed, traded, or delisted on centralized or decentralized exchanges at the discretion of such platforms. Market and liquidity conditions are outside the control of the founding contributors and the DAO.

Risks include:

- inability to buy or sell \$NONPC at desired times or prices;
- thin order books, slippage, or high price volatility; and
- concentration of holdings in a small number of wallets, which may increase the risk of large price movements.

8. Eligibility, Tax, and Compliance

Participation in the acquisition or use of \$NONPC may be unlawful or restricted for certain persons or in certain jurisdictions (for example, due to securities laws, anti-money-laundering

rules, sanctions, or other regulatory frameworks).

Each participant is solely responsible for:

- determining whether they are permitted to acquire, hold, or use \$NONPC under the laws that apply to them; and
- complying with any applicable legal, tax, reporting, and regulatory obligations.

The founding contributors reserve the right, but do not undertake any obligation, to restrict or deny access to \$NONPC to persons or entities from certain jurisdictions or who fail to satisfy compliance requirements.

9. Forward-Looking Statements

This Whitepaper may contain statements about future events, plans, objectives, or expectations (including, without limitation, statements regarding roadmap milestones, ecosystem growth, or potential collaborations). Such statements are inherently uncertain, based on current assumptions, and subject to change without notice.

Actual outcomes may differ materially from those expressed or implied by any forward-looking statements. No guarantee is made that any plans, projections, or targets described in this Whitepaper will be achieved.

10. No Reliance and No Additional Representations

By reading this Whitepaper or by acquiring, holding, or using \$NONPC, you acknowledge and agree that:

- you are not relying on any representation, warranty, or statement, whether express or implied, by any person or entity regarding \$NONPC or the No NPC Society ecosystem, other than those explicitly set out in finalized, binding legal agreements (if any); and
- you understand and accept all of the risks described in this section and any additional risks that may not be foreseeable at this time.

Nothing in this Whitepaper creates any contractual or other legally binding obligation on the founding contributors, the DAO, or any other person, unless and until such obligation is set out in a separate, binding written agreement.
